Subject: Computer infection attempts

## REQUEST

How many computer infection attempts have been cleared/stopped by your firewall or antivirus software by day for the month of May 2017 so far?

## RESPONSE

The Trust must do its utmost to protect patient and staff information.

Patient information and staff information are the foundations upon which healthcare is built, and the Trust have a clear responsibility to safeguard this information to ensure we are able to provide the necessary care to our service users.

To provide the requested information above would highlight any vulnerability, should any such vulnerability exist (within hardware or software or architecture or Vendor, etc.), within our IT infrastructure which could be exploited for the purposes of ransomware, other malware, or to withhold/disrupt IT functionality within the Trust.

Therefore, to confirm or deny how many computer infection attempts have been cleared/stopped by our firewall or antivirus software (and any further detail about architecture in our IT network) is likely to assist criminal offenders thereby seriously threatening the effective delivery of healthcare by the Trust. The act of gathering information as requested, in the hacking arena is known as foot-printing and our network architecture is closely protected to at least NHS protect if not NHS Confidential. Therefore:

Our patients (and staff) must have confidence that their very sensitive personal data will be held securely.

They (patients & staff) must have confidence that we'll be able to provide the services they need.

Therefore, providing the specific requested information would put their confidence at risk.

Furthermore, loss of patient and staff data by such an attack would massively impact upon our ability to provide effective healthcare to our service users.

And therefore, this would be extremely harmful to the public & the services the Trust provides.
