Subject: Public sector pipelines

REQUEST

- The total pipeline of public sector projects involving any aspect of the Built Environment, Construction, Consultancy Services or Professional Services in any capacity;
- The total value of these projects;
- The expected benefits and high level policy outcomes of these projects;
- Descriptive information for each of these projects, including location, value, and procuring authority;
- Descriptive information for any other public sector projects involving any aspect of the Built Environment, Construction, Consultancy Services or Professional Services in any capacity.

RESPONSE

After asking for clarification this was the response the Trust received:-

“I am referring to any building, construction or infrastructure development work that is currently planned by the Council, whether that is due to start next month, or in a few years time.

I would be looking for this information from your Building/Planning departments, or if your estates and facilities team are responsible for bringing new buildings and facilities to fruition, they would be appropriate.

The information that I am seeking is in regards to construction and infrastructure work that your Council is undertaking or is planning to undertake. I'm looking for data for the professional or consultancy services being used on this work. It would include services such as surveying, feasibility studies, landscape design, planning, structural design, flood risk management, transport planning and business consultancy - all from sources outside of the Council”.

St Helens and Knowsley Teaching Hospitals NHS Trust are a health care provider and not a Council. Therefore the work streams do not follow the public sector pipeline process.
