Subject: Atopic dermatitis

REQUEST

I am writing to you today to ask: How many patients are currently being treated for moderate or severe atopic dermatitis (also known as eczema) ?

Please split these patients by their current drug treatment;

Treatment	Total Patients	Acitretin	Alitretinoin	Pimecrolimus	Tacrolimus	Dupixent (dupilumab)	Phototherapy including with ultraviolet (UVB)	Potent Topical Corticosteroids (see list below)	Immunosuppressive therapies (see list below)
Number of Patients – currently on treatment for moderate-severe atopic dermatitis									

Potent Topical Corticosteroids [creams or ointments]

- Amcinonide 0.05% (Cyclocort)
- Betamethasone dipropionate 0.05% (Diprosone)
- Betamethasone valerate
- Clobetasol propionate
- Desoximetasone 0.25% (Topicort)
- Diflucortolone valerate
- Fluocinonide 0.05% (Lidex)
- Fluticasone propionate 0.005% (Cutivate)
- Halcinonide 0.05% (Halog)
- Mometasone furoate 0.1% (Elocon ointment)
- Triamcinolone acetonide 0.5% (Kenalog, Aristocort cream)

- Betamethasone dipropionate 0.25% (Diprolene)
- Clobetasol dipropionate 0.05% (Temovate)
- Diflorasone diacetate 0.05% (Psorcon)
- Halbetasol propionate 0.05% (Ultravate)

Immunosuppressive therapies

- Azathioprine
- Ciclosporin
- methotrexate

RESPONSE

The pharmacy system does not record the indication for which a medication has been supplied so we are unable to provide any information relating to the number of patients being treated for a specific indication.
