Subject: Specialist Skin MDTs

REQUEST & RESPONSE

There are two types of skin cancer MDTs; Local Skin MDTs and Specialist skin cancer multidisciplinary teams (SSMDT).

Specialist Skin MDTs will normally consider patients who:

- have a rare skin cancer.
- have SCC or melanoma that's at higher risk of coming back or has come back.
- have any type of skin cancer that's spread to another part of the body.
- need treatment that the Local Hospital Skin Cancer MDT doesn't provide.
- may be offered to participate in a clinical trial.

If your Trust hosts a Specialist Skin MDT, we would be very grateful for the names of the MDT participants please.
