Date: 06/11/18
Subject: Electronic Patient Record

REQUEST

Please can all responses be sent back to this e-mail address please.

1. Does your Trust have a fully or partially implemented Electronic Patient Record (EPR)?

If yes:

2. What is the name and supplier of the EPR?

3. For inpatient / daycase activity does the EPR have an 'auto clinical coding' function i.e. can clinical codes (ICD-10 / OPCS) be automatically assigned / suggested without manual intervention by a clinical coder?

If yes:

4. Is the auto-coding based solely on structured clinical information or is free-text analysed in addition?

5. If free-text is used how is this analysed to predict clinical codes?

6. If based on structured clinical information which clinical classification / terminology is used to record the clinical information (e.g. SNOMED CT / ICD-10 / OPCS / local codes)?

7. Does the Trust utilise the auto-coding function in any way?

8. If yes then which specialties is it used for?

9. Is all auto-coding validated by trained clinical coders?

10. Has the auto-coding improved the Trust's clinical coding audit results / accuracy levels?

11. Has the auto-coding improved the depth of coding in anyway?

12. If the auto-coding function is not used what are the reasons for not using this function.

RESPONSE

1. Does your Trust have a fully or partially implemented Electronic Patient Record (EPR)? **Yes**

If yes:

2. What is the name and supplier of the EPR? **SystemC Medway**

3. For inpatient / daycase activity does the EPR have an 'auto clinical coding' function i.e. can clinical codes (ICD-10 / OPCS) be automatically assigned / suggested without manual intervention by a clinical coder? **No**
