

Open and Honest Care in your Local Hospital

The *Open and Honest Care: Driving Improvement* programme aims to support organisations to become more transparent and consistent in publishing safety, experience and improvement data; with the overall aim of improving care, practice and culture.

Report for:

**St Helens & Knowsley
Teaching Hospitals Trust**

January 2014

Open and Honest Care at St Helens & Knowsley Teaching Hospitals NHS Trust : January 2014

This report is based on information from January 2014. The information is presented in three key categories: safety, experience and improvement. This report will also signpost you towards additional information about the Trust's performance.

1. SAFETY

Safety Thermometer

On one day each month we check to see how many of our patients suffered certain types of harm whilst in our care. We call this the safety thermometer. The safety thermometer looks at four harms: pressure ulcers, falls, blood clots and urine infections for those patients who have a urinary catheter in place. This helps us to understand where we need to make improvements. The score below shows the percentage of patients who did not experience any new harms.

98.0% of patients did not experience any of the four harms in this trust.

For more information, including a breakdown by category, please visit:

<http://www.safetythermometer.nhs.uk/>

Health Care Associated Infections (HCAIs)

HCAIs are infections acquired as a result of healthcare interventions. Clostridium difficile (C.difficile) and methicillin-resistant staphylococcus aureus (MRSA) bacteremia are the most common. C.difficile is a type of bacterial infection that can affect the digestive system, causing diarrhoea, fever and painful abdominal cramps - and sometimes more serious complications. The bacteria does not normally affect healthy people, but because some antibiotics remove the 'good bacteria' in the gut that protect against C.difficile, people on these antibiotics are at greater risk.

The MRSA bacteria is often carried on the skin and inside the nose and throat. It is a particular problem in hospitals because if it gets into a break in the skin it can cause serious infections and blood poisoning. It is also more difficult to treat than other bacterial infections as it is resistant to a number of widely-used antibiotics.

We have a zero tolerance policy to infections and are working towards eradicating them; part of this process is to set improvement targets. If the number of actual cases is greater than the target then we have not improved enough. The table below shows the number of infections we have had this month, plus the results for the year to date.

	C.difficile	MRSA
This month	3	1
Actual to date	17	4

Pressure Ulcers

Pressure ulcers are localised injuries to the skin and/or underlying tissue as a result of pressure. They are sometimes known as bedsores. They can be classified into four grades, with one being the least severe and four being the most severe.

This month 4 Grade 2 pressure ulcers were acquired during hospital stays.

Severity	Number of pressure ulcers
Grade 2	4
Grade 3	0
Grade 4	0

So we can know if we are improving even if the number of patients we are caring for goes up or down, we also calculate an average called 'rate per 1,000 occupied bed days'. This allows us to compare our improvement over time, but cannot be used to compare us with other hospitals, as their staff may report pressure ulcers in different ways, and their patients may be more or less vulnerable to developing pressure ulcers than our patients. For example, other hospitals may have younger or older patient populations, who are more or less mobile, or are undergoing treatment for different illnesses.

Rate per 1000 bed days:	0.20
-------------------------	------

Falls

This measure includes all falls in the hospital that resulted in injury, categorised as moderate, severe or death, regardless of cause.

This month we reported 3 falls that caused at least 'moderate' harm.

Severity	Number of falls
Moderate	3
Severe	0
Death	0

So we can know if we are improving even if the number of patients we are caring for goes up or down, we also calculate an average called 'rate per 1,000 occupied bed days'. This allows us to compare our improvement over time, but cannot be used to compare us with other hospitals, as their staff may report falls in different ways, and their patients may be more or less vulnerable to falling than our patients. For example, other hospitals may have younger or older patient populations, who are more or less mobile, or are undergoing treatment for different illnesses.

Rate per 1,000 bed days:	0.15
--------------------------	------

2. EXPERIENCE

To measure patient and staff experience we use a Net Promoter Score.

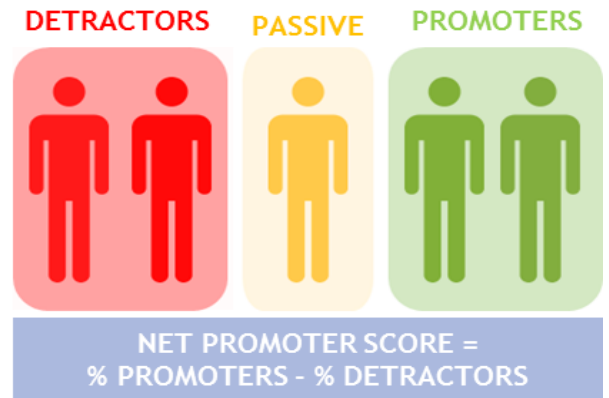

The idea is simple: if you like using a certain product or doing business with a particular company you like to share this experience with others.

From the answers given 3 groups of people can be distinguished:

Detractors - people who would probably not recommend you based on their experience, or couldn't say .

Passive - people who may recommend you but not strongly.

Promoters - people who have had an experience which they would definitely recommend to others.

This gives a score of between -100 and +100, with +100 being the best possible result.

Patient experience

The Friends and Family Test

The Friends and Family Test requires all patients, after discharge, to be asked: *How likely are you to recommend our ward to friends and family if they needed similar care or treatment?*

The hospital had a score of **78** for the Friends and Family test*. This is based on 833 responses.

*This result may have changed since publication, for the latest score please visit:

<http://www.england.nhs.uk/statistics/statistical-work-areas/friends-and-family-test/friends-and-family-test-data/>

We also asked 263 patients the following questions about their care:

	Net Promoter Score
Were you involved as much as you wanted to be in the decisions about your care and treatment?	39
If you were concerned or anxious about anything while you were in hospital, did you find a member of staff to talk to?	46
Were you given enough privacy when discussing your condition or treatment?	52
During your stay were you treated with compassion by hospital staff?	66
Did you always have access to the call bell when you needed it?	64
Did you get the care you felt you required when you needed it most?	59
How likely are you to recommend our ward/unit to friends and family if they needed similar care or treatment?	71

Patients feedback

"I came to the ward knowing I would receive excellent care as have been before and have no problems recommending the ward to anyone I meet. The staff really are a credit to the hospital. Thank you very much for all my care!"-- **anon. ward 4B**

"I have needed to stay in hospital on several occasions over the years and can say that my experience has been a positive one, in that all the staff have been very helpful, courteous and respectful at all times. They are always happy to help and support even in times when they have been under pressure. Thank you- **anon. ward 4C**

"The housekeeper and domestic have done a wonderful job of keeping my room clean and tidy! All the staff here are great!" **anon. ward 1E**

Staff experience

We asked 224 staff the following questions:

	Net Promoter Score
I would recommend this ward/unit as a place to work	41
I would recommend the standard of care on this ward/unit to a friend or relative if they needed treatment	54
I am satisfied with the quality of care I give to the patients, carers and their families	51

3. IMPROVEMENT

Improvement Story: we are listening to our patients and making changes

Friday 28th February 2014 is an important day for the Nursing and Midwifery workforce in the Trust along with the patient representatives who have worked so hard on the development and implementation of the Nursing & Midwifery Strategy. The Trust is officially launching the strategy at an event in the Education Centre. This event will be attended by staff from the Trust, colleagues from the local CCG's, Trust Executives and Non Executives and members of Healthwatch. It will be a fantatstic opportunity to showcase work being delivered by staff and patients working together with one aim, based on a combined decision about what is important.
