

Ref. No: 179120721
From: Public
Date: 12/07/21
Subject: Smear tests

REQUEST

Please could you tell me the number of women for each month between June 2015 and June 2021 whose smear tests have shown that they have:

- a) HPV?
- b) abnormal cells?

Please could you also tell me how many smear tests were done in each month, so that I can express this as a percentage of total smear tests?

If you have the information, please could you tell me what the average time was between smear tests for individual patients (ie, they had them on average every three years 2 months etc) for each month from June 2015 to June 2021?

If this exceeds the cost limit for an FOI request, please disregard the last part of this request.

RESPONSE

Smear tests are not performed at the Trust
